EDUCATION

Georgia Institute of Technology

B.S. in Computer Science, Artificial Intelligence and Information Internetworks

Atlanta, GA

May 2028

- GPA: **3.78**
- Coursework: Data Structures and Algorithms, Computer Organization and Programming, Operating Systems, Computer Networks, Machine Learning, Discrete Math, Linear Algebra, Object Oriented Programming

TECHNICAL SKILLS

Languages: Java, Python, C++, C, SQL, JavaScript, TypeScript, GoLang, Bash/Shell, HTML, CSS

Systems & Distributed Computing: Distributed Systems, Databases, Concurrency, Low Latency Systems, Real Time Systems, HPC, Data Structures, Algorithms

AI / ML: Prompt Engineering, PyTorch, scikit-learn, OpenCV, LangChain, LangGraph, LlamaIndex, RAG, Multi-Agent Systems

Data & Infrastructure: PostgreSQL, Salesforce, Data Pipelines, Vector DBs, Docker, Kubernetes, AWS, CI/CD, Prometheus, Linux, Git

Frameworks: React.js, Next.js, Node.js, FastAPI, Flask, REST APIs, GraphQL

EXPERIENCE

Software Engineering Intern

May 2026 – Present

New York Life Securities

New York, NY

- Led integration of the **Hiya** caller identity API into the agent outbound calling platform, deploying **Python** microservices on **AWS** to automate number registration, branded caller ID provisioning, and reputation monitoring across **7,000+** agent lines, increasing customer answer rates by **38%**.
- Built a **full stack** client notes application in **React**, **TypeScript**, and **Python** on **AWS**, capturing agent meetings via audio and image upload and writing structured records directly to **Salesforce** through a custom Connected App and **OAuth** token exchange, cutting post-appointment data entry by **12 min** per visit across **200+** agents.
- Designed and shipped an accessibility tool in **React** and **TypeScript** for agent facing applications, automating **WCAG 2.1 AA** audits and remediating screen reader and keyboard navigation gaps for **500+** users.

Software Engineering Intern

May 2025 – Dec. 2025

Fintelx

North Brunswick, NJ

- Built and deployed a **RAG** retrieval pipeline in **Python** backed by a vector database for low latency semantic search across **500+** financial records, containerized with **Docker** and deployed via automated **CI/CD** workflows, improving retrieval accuracy by **25%**.
- Owned end to end design and delivery of a **full stack** financial data application using **React.js**, **Next.js**, and **TypeScript**, configuring **PostgreSQL** databases and integrating real time **LLM** inference into backend pipelines via REST APIs.

Software Engineering Intern

Jul. 2024 – Aug. 2025

Photon Insights

West Conshohocken, PA

- Architected and deployed a scalable **data pipeline** in **Python** using REST APIs for automated real time analytics across **10,000+** records, reducing processing latency by **~35%** and monitoring system health and application logs to diagnose production failures.
- Delivered **full stack** analytics features across **3+** live **AI** workflows using **React.js**, **TypeScript**, and **Python** on **Linux** infrastructure, enforcing quality through structured code reviews and technical documentation.

Research Intern

Jun. 2024 – Aug. 2024

NJIT Bader Research Group, Department of Computer Science

Newark, NJ

- Implemented **Monte Carlo** simulation algorithms in **Python** for large scale spatiotemporal analysis on **Linux HPC** systems, applying **parallel computing** and **scikit-learn** DBSCAN clustering across high dimensional datasets, validating model correctness through log and simulation output analysis.

PROGRAMMING PROJECTS

Arena Vision | *Google ADK, Gemini Vision, OpenCV, NumPy, Streamlit, MoviePy, REST APIs*

Nov. 2025 – Present

- Engineered an autonomous sports highlight generator that turns raw game footage into finished highlight reels with no manual editing, using **Gemini Vision** and **OpenCV** for frame by frame analysis and **Google ADK** to orchestrate detection, semantic ranking, and assembly of key gameplay moments.
- Built the end to end video processing pipeline in **Python** with **MoviePy** and a **Streamlit** interface, handling video, audio, and metadata and integrating **REST APIs** with the **Twitter/X** chunked media upload system to publish highlights automatically.

Apache Airavata (Airavata 2.0 / NASA) — *Software Engineer | Python, Java, Docker, Distributed Systems*

Jan. 2026 – Present

- Contributed production **Python** and **Java** code to an NSF/NASA-funded open source **distributed systems** project, designing performance optimized data readers with selective loading across **12 to 48** model layers and **64 to 256** attention heads in large scale ML trace datasets, cutting load times by **40 to 70%** on **Linux HPC** environments.
- Worked across a large multi-language codebase emphasizing scalability, reliability, and **fault tolerance**, maintaining version control via **Git/GitHub**, producing technical documentation of system architecture, and incorporating structured mentor code reviews to uphold code quality and correctness.

LEADERSHIP & ACTIVITIES

Tennis Coach — Coach tennis fundamentals and match strategy to players; competitive player with a UTR of 7.44.
